

**Technoform Bautec NA and Technoform Glass Insulation NA now offer Continuing Education Credits from AEC Daily as well!**

[www.aecdaily.com/sponsor/technoform](http://www.aecdaily.com/sponsor/technoform)

Starting with an overview of the energy drivers in the market, and a preview of the coming code requirements, the presentation then examines polyamide strip technologies available for thermally breaking aluminum frames, and how this can reduce energy costs.

Next up is the glass ... various methods for improving the thermal performance of glass are discussed, plus improvement of insulating glass units through the use of warm edge spacers.

The summary shows how a combination of these technologies can meet the market requirements for a sustainable and high-performing window system.
